EDUCATION

University of California at Berkeley

Aug 2021 – May 2025

Dual Bachelors in Computer Science and Statistics

Berkeley, CA

- Overall GPA: 3.85
- Selected Coursework: Data Structures, Efficient Algorithms, Machine Structures, Artificial Intelligence, Probability Theory, Multivariable Calculus, Discrete Math, Linear Algebra, Real Analysis, Quant Finance
- Activities: Mathematics Undergraduate Student Association, Poker@Berkeley, Berkeley Forum (Debate), Berkeley Formula Racing, Pickleball Team

WORK EXPERIENCE

Data Engineering Intern

June 2023 – August 2023

Condé Nast

New York City, NY

- Built and Maintained robust, enterprise-scale data pipelines to transform first & third party data into delta tables
- Designed ETL processes utilizing Apache Spark, Databricks, DynamoDB to retrieve active subscriber data from S3
- Proposed and Implemented App Service to ship out overstocked products through monthly brand subscriptions as a method to increase Gen-Z engagement; Achieved 1st place among intern cohort pitch competition
- Tech: Databricks, Pipeline ETL's, Apache Spark, AWS DynamoDB, Airflow DAG's, Docker, Astro CLI

Software Engineering Intern

Oct 2022 – May 2023

S and C Electric Co.

Alameda, CA

- Developed and maintained automated test systems using C++ in low power environments to exercise software functionalities on electric grids' motherboards
- Developed Frontend Web UI for WiFi-enabled GPS device management login page using React
- Detailed software test requirements for products by working side-by-side with hardware, software, and QA team
- Reduced daily lab test - check times by 90% by automating device pinging through Python Batch Script
- Tech: C++, React, Raspberry Pi, Python Batch Scripts, SCRUM

Software Engineering Intern

Jun 2022 – Aug 2022

ANB Systems

Houston, TX

- Improved client security by building Redaction service that changes sensitive data in documents using JavaScript
- Implemented and maintained document recognition system using OCR detection software in Python
- Cut debugging costs by displaying backend document extraction status and metadata on user dashboard
- Tech: Python, Postman, JavaScript, AWS S3, OpenCV, tesseract

SELECTED PROJECTS

Bay Area Rapid Transit (BART) Train Schedule App | *Python, Django, React, PostgreSQL, BART API* 2023

- Developed full-stack app that provides real-time BART train departure times with Django, PostgreSQL and React
- Allows users to efficiently filter departure times based on station, line, and direction using custom SQL commands
- Implemented responsive interface using React and backend server using Django that connects to necessary API's

Pacman Agent Model | *Python, GUI, Anaconda Virtual Env, Git*

2022

- Implemented Pacman AI using Approx. Q-learning in adversarial minimax and expectimax search problems
- Used Bayesian networks and Hidden Markov Models to find ghosts on board given noisy readings of distances

Reprogramming Num.py in C | *C, Python, SIMD, Parallelism, Memory Allocation*

2022

- Developed simplified version of NumPy Python library in C for fast matrix multiplication and array manipulation
- Achieved speedup ratio of 55.7x times using parallelism and Single Instruction Multi Data (SIMD) commands

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, HTML/CSS, R, SQL, Bash, VBA

Frameworks: React, Django, Mongo, PostgreSQL, Next.js, Node, JUnit, Material-UI, Apache Spark

Developer Tools: Git, AWS Cloud, Github/Gitlab/BitBucket, Docker, Postman, VS Code, IntelliJ, Eclipse

Libraries: pandas, NumPy, Matplotlib, OpenCV, Discord.py, BeautifulSoup, SKLearn, TensorFlow, Selenium
